PRINTROOM MAINTENANCE PLANNING

Prepare well. Make the visit count.

Use these prompts to organize the equipment discussion. Follow manufacturer instructions and your workplace procedures for maintenance and inspections.

Identify the equipment

Record the press make, model, affected station, and relevant configuration.

Collect the fault history

Note exact codes, symptoms, when they occur, and whether they are intermittent.

Review the service records

Gather recent repairs, replaced parts, adjustments, and outstanding recommendations.

List observed changes

Record unusual noise, movement, performance changes, or safely visible wear.

Plan the service window

Identify production pauses, machine access needs, and preparation requirements.

Keep the follow-up together

Record findings, work completed, parts used, and future maintenance priorities.

A clearer brief. A better starting point.

Organize the make, model, symptoms, production status, and recent work before discussing a repair or maintenance visit.
